Good morning-

I followed through on a question from our last meeting about Placer County's sanding activity on county maintained roads near Homewood Mountain Resort. Attached is a spreadsheet I obtained from our Road's Supervisor that outlines the amount of road sand in tons per month that they applied for the fiscal years of 2008/2009 and 2009/2010. Key points to know when your reviewing the information:

- Placer County Department of Public Works will send out a sweeper within 72 hours after the sand is applied and weather conditions warrant to pick up loose sand;
- Placer County Department of Public Works sends their HVAC equipment each summer to clean out road culverts of any remaining sand that was applied that winter;
- Typically the amount of sand they remove each year is more than they apply since they are also picking up Caltrans sand that has meandered to the local culverts
